                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a G-protein coupled receptor (GPCR) and mucleotide encoding it. GPCR are useful in the manufacture of a medicament for the prevention and/or treatment of receptor-mediated disorders e.g. viral infections, virus and bacterial diseases, diseases and disorders involving disturbances of feell migration, diseases or perturbations of immune system including cancers, development of tumours and tumour metastasis, inflammatory and neoplastic processes; bacterial and tungul infections; in wound and bone healing, dysfunction of regulatory growth functions; pains, diabetes, obesity, anorexia, bulimia, urinary retention, osteoporosis, angina pectoris, atherosclerosis, restenosis, diseases involving excessive or reduced proliferation or loss restenosis, missing an excessive or reduced proliferation or loss for months.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HEAVNTISTRVAAGIVCTIWALVILGTVYLLIENHLCVQETAVSCESFIMESANGWHDIM 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of smooth muscle cells, aneurysm, stroke, ischaemia, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting; blood circulating affections prostatic hypertrophy, migraine, vomiting; blood circulating adfections including acute heart failure, hypotension, hypertrension and mycoradial infarction psychotic; neuronal disorders such as anxiety, schizophrenia, maniac depression, depression, delirium, dementia, servere mental retardation; degenerative disease; neurodegenerative diseases such as Alzheimer's disease, Parkinson's disease; and dyskinesias e.g. Huntingcon's disease or gilles de la Tourette's syndrome and other related diseases. The present sequence is GPCRX14 protein
                                                                                                                                                                                                                                                                                     New G-protein coupled receptor, useful in the manufacture of medicaments for treating receptor mediated disorders e.g. acute heart failure and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DFLLMICLPFRIDYYLRRRHWAFGDIPCRVGLFTLAMNRAGSIVFLTVVAADRYFKVVHP

```

This invention relates to a human lipocyte-oxiginated G protein-coupled thereptor proteins TGR13, thought to be antiinflammatory and anorectic in their action. The proteins and encoded DNAs are for use in developing drugs to treat obesity and inflammation, including gene therapy. The present sequence represents the human lipocyte-oxiginated G protein-coupled receptor protein TGR13 Sequence 346 AA;

2002-674879/72 N-PSDB; ABS70241 New nucleic acids and polypeptides of the ng protein-coupled receptor, useful for treating or diagnosing a mental disorder or a disorder affecting the brain, e.g. anxiety disorders, schizophrenia, stroke or Parkinson's disease

Example 1; Page 84; 244pp; English.

ö

The invention discloses an isolated human polypeptide, and encoding nucleic acid, for a G protein-coupled receptor (GPCR), particularly the C of protein coupled receptor-14 (nGPCR-14). GPCRs are vital in the communication between cells and their envisonment and are characterised trimes, hence the reason such receptors are sometimes called seven transmembrane receptors (7TM). The polymucleotides and polypeptides are useful for identifying an nGPCR allelic variant that correlates with a cumparal disorder, for isolating an antibody that binds the polypeptide or the polypeptide, for identifying a compound that binds the polypeptide or by polyucleotide and/or modulates its biological activity, for screening a compound susful for the treatment of a mental disorder, and for identifying a compound useful as a modulator of binding between the for identifying a compound useful as a modulator of binding between completed for inducing an immune response in a mammal. The nucleic also or useful for inducing an immune response in a mammal. The nucleic acid or completes, disorders, depression, bipolar disorder, schizophrenia, completed for treating diabetes, manic depression, stroke, Parkinson's disease or Alzheimer's disbesse. The nucleic acid and polypeptide may also be useful for habd31795 and ABG31796 are the nGPCR (also referred to as beGPCRs) proteins

                                                                                                    FQLEFFMPLGIILFCSFKIVMSLRRRQQLARQARMKKATRFIMVVAIVFITCYLPSVSAR 240
                                                                                                                                                    The invention relates to a method for screening G protein-coupled receptor (GPCR) genes (AB242870-AB241216) and/or GPCR proteins (ABP95586-ABP95942) by extracting open-reading frames containing 6-8 transmembrane a known GPCR gene. The receptor proteins and encoded genes are useful for for drug development e.g. based on olfactory and gustatory receptors for drug development e.g. based on olfactory and gustatory receptors in ligands as bitter taste inhibitors, taste enhancers and fragrance improvers. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences

The invention comprises the amino acid and coding sequence of the human purinergic-like G-protein coupled receptor AXOR87. The AXOR87 DNA and protein sequences of the invention may be used for treating diseases infelated to immunity, autoimmunity, inflammation, immunodeficiency, and infections (i.e. batterial, fungal, viral, protozoan). The AXOR87 DNA and protein sequences are particularly useful for treating: cancers, diabetes, obseity, anorexia, bulimia, asthma, psoriamis, theumatoid arthritis, osteoarchritis, as well as psychotic and neurological arthritis, osteoarchritis, as well as psychotic and neurological disorders. The AXOR87 DNA and protein sequences may also be used as vaccines. The present amino acid sequence (encoded by a sequence located on chromosome 12q24) represents the human AXOR87 protein

Human G protein coupled receptor nucleic acid and polypeptide molecules, designated 57242, useful for diagnosing, preventing or treating aberrant lipogenesis or aberrant lipolysis, obesity, diabetes or bone disorders (e.g. osteoporosis)

Claim 9; Page 112-113; 114pp; English.

The invention relates to G protein coupled receptor (GPCR) family member, 57242 and its corresponding nucleic acid sequence. The 57242 nucleic acid and polypeptide are useful for diagnosing, preventing or treating a subject having or at risk of developing a metabolic disorder, particularly a disorder associated with aberrant lipogenesis or aberrant lipolysis, obesity or diabetes. The 57242 DNA and protein are also useful

```
â
for treating a subject having bone disorder, where the disorder is absteoprosis or a disorder associated with aberrant osteogenesis or abstrant bone resorption. These diseases include obesity, diabetes, hyperlipidaemia, overweight, anorexia or cachexia. The 57242 DNA and protein are also useful for treating a subject having haematopoietic disorders autoimmune disorders e.g. psoriasis and multiple sclerosis, brain disorders, degenerative disease e.g. Alzheimer's disease and pick disease and disorders involving heart. The 57242 nucleic acid and polypeptide are also useful for modulating adipocyte activity such as hyperplastic growth, hypertophic growth or lipogenesis. The 57242 DNA is used in gene therapy. The present sequence is human 57242 protein
                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

19-DEC-2001; 2001WO-US050107.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or consider a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the CPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related diseases, growth-related diseases for GPCRs and antibodies are useful for diagnosing and designing drugs for regeneration-related diseases, immunological-related diseases, call creating immune-related diseases, immunological-related diseases, call abertainer's disease, call antibodies and acute inflammation, allergies, Crohm's disease, park, candiomyopathy, chronic and acute inflammation, allergies, Crohm's disease, pain, psoriasis, calcortain, depression, schizophrenia, dementia, mental retardation, memory consistent in which GPCRs are involved. The antibodies may be consistent inflammation immunodiagnosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or cused in immunodiagnosis, obesity, mausea, hypertension, the proteins given in ABP81675 to ABP82018, which are used in the code complification of the present invention New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or Disclosure; Fig 1; 523pp; English. (LIFE-) LIFESPAN BIOSCIENCES INC. Brown JP; 19-DEC-2000; 2000US-0257144P. ij autoimmune diseases. 2003-046718/04 Roush N-PSDB; ABZ42592. ပ္ပဲ Burmer

```
The invention relates to a novel isolated G-Protein Coupled Receptor (GPCR) protein. The methods and compositions of the present invention are useful for diagnosis, treatment, amelioration and/or prevention of diseases associated with G-Protein Coupled Receptor (GPCR) polypeptides, such as obesity, diabetes, dyslipidaemia, asthma, bronchitis, allergies, angina, glomerulonephritis, hepatitis and allograft rejection. This sequence represents the human GPCR protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anorectic; antidiabetic; antilipaemic; antiasthmatic; antinflammatory; antiallergic; antianginal; nephrotropic; hepatotropic; immunosuppressive; vituoide; G-Protein-agonist; G-Protein-antagonist; dyslipidaemia; GPCR; G-Protein Coupled Receptor; Obesity; diabetes; asthma; bronchitis; allergy; angina; glomerulonephritis; hepatitis; allograft rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 DFLIMICLPERIDYYLRRRHWAFGDIPCRVGLFTLAMNRAGSIVFLTVVAADRYFKVVHP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a human G protein-coupled receptor (GPCR), designated GAVE3 GAVE3 is located on human chromosome 12. GAVE3 thas antiinflammatory, artiasthmatic, antishmatic and antiarthritic activities. GAVE3 nucleic acids, polypeptides, agonists and antiaponists can be used for preventing or treating a disorder associated with a berrant GAVE3 expression or activity, e.g. inflammatory disorder such as asthma, chronic obstructive pulmonary disease or rheumatorid arthritis. The nucleic acids and polypeptides can also be useful for identifying or have a stimulatory or inhibitory effect on GAVE3 expression or activity. The nucleotide sequences can also be used for chromosomal mapping, tissue typing or forensic biology. Host cells comporising GAVE3 can be used for producing non-human transgenic animals for studying the function and/or activity of GAVE3, or for identifying and/or evaluating modulators of GAVE3 activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

"Molecular cloning of cDNAs encoding a LD78 receptor and putative
leukcorte chemotactic peptide receptors.";
Int. Immunol. 5:1239-1249(1933).
-!- FUNCTION: Orphan receptor.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                                                                                                                                                                                                                  J. Biol. Chem. 276:47489-47495 (2001).

-!- FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositolacalcium second messenger system. The rank order of affinities for the leukotrienes is LTC4 = LTD4 >> LTE4.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: Widely expressed at low levels, with highest expression in the spleen, thymus and adrenal gland, and lower in the kidney, brain and peripheral blood leukocytes.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 YNGSCCRIBGDTISQVMPPLLIVAFVLGALGNGVALCGFCPHMKTWKPST---VYLFNLA

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation -
                                                                  Submitted (ARP-2000) to the BMBL/GenBank/DDBJ databases.

-!-FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. Situmlation by BAY u373, a partial agonist, induces specific contractions of pulmonary veins and might also have an indirect role in the relaxation of the pulmonary vascular endothelium. The rank order of affinities for the leukotrienes is LTC4 = LTD4 >> LTB4.

-!- SUBCELLULAR LOCATION! Integral membrane protein.

-!- TISSUB SPECIFICITY: Widely expressed, with highest levels in the heart, placenta, spleen, peripheral blood leukocytes and adrenal place in lumny, expressed in the interstitial macrophages, and slightly in smooth muscle cells.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Van Rhee A.M., Fischer B., van Galen P.J.M., Jacobson K.A.;

Wandling the P2Y purinoceptor using rhodopsin as template.";

Drug Des. Discov. 13:133-140(1995).

I- FUNCTION: Receptor for extracellular adenine myclectides such as ATP and ADP. Seems to mediate its action via a pertussis toxin insensitive G-protein, probably belonging to the Gq family that activate a phosphatidylinositol-calcium second messenger system.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Brain, spinal cord, gastrointestinal tract, spleen and leg mascle. Is not detected in the heart, liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Webb T.E., Simon J., Krishek B.J., Bateson A.N., Smart T.G.,

Li Q., Schachter J.B., Harden T.K., Nicholas R.A.;
The 6H1 orphan receptor claimed to be the p2y5 receptor, does not mediate nucleotide-promoted second messenger responses.";
Michem. Biophys. Res. Commun. 236:455-466(1997).
Li PUNCTION: Receptor for extracellular adenine nucleotides such as ATP and ADD. Seems to mediate its action via a pertussis to oxin insensitive G-protein, probably belonging to the Gq family that activate a phosphatidylinositol-calcium second messenger system.
CI-SUBCELLULAR LOCATION: Integral membrane protein.
CI-SUBCELLULAR LOCATION: Integral membrane protein.
CI-SUBCELLULAR LOCATION: Integral membrane protein.
CI-SUBCELLULAR LOCATION: Aninly found in blood, brain, and lung. To a lesser extent in stomach, gut and skeletal muscle.
CI-SUMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. receptors.";
Submitted (DRC-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for cysteintyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ATP and ADP. In pancreatic islets, may mediate some of the effects of extracellular ATP on insulin secretion.
-!- SUBCELULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Extressed in muscle, heart, liver, kidney, lung, brain, spleen, but not in testis.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                 Craniata, Vertebrata, Buteleostomi,

  ATP and ADP. In pancreatic islets, may mediate some of the effects of extracellular ATP on insulin secretion.
SUBCELULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
  "Thromboresistance in P2Y1 receptor knockout mice.";
Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for extracellular adenine nucleotides such as

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
